*Allowable Subject Matter*

1. Claims 44-48 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention concerns to reduce phase noise and distortion in the conversion of an analog video signal to a digital video signal and apparatus comprising:

a frame conversion unit to convert frames of analog image data to frames of digital image data;

a buffer coupled with the frame conversion to store the frame of digital image data and subsequent converted frames

a pixel value comparator coupled with the buffer to compare pixel data of the frame of digital data, a capture switch configured to be set to on when the subsequent converted frame pixel data exceeds threshold amount and where the capture switch is configured to be set to off when the subsequent converted frame pixel data is below the threshold amount;

a capture switch configured to be set to on when the subsequent converted frame pixel data exceeds the threshold amount and where the capture switch is configured to be set to off when the subsequent converted frame pixel data is below the threshold amount;

a microcontroller configured to capture the subsequent converted frame with pixel data that exceeds threshold amount for storage and display, as claimed in claim 44. The closest art, Kuzma, Manning and Drake et al. disclose noise reduction, either singularly or in combination fail to anticipate or render the above underlined limitation obvious.

Claims 45-48 depend on claim 44.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
